SCI EDGE outcome measures for acute(0–3mo) SCI

The SCI EDGE task force reviewed 63 outcome measures covering the range of body structure and function, activities and participation evaluating each for psychometrics and clinical utility for patients with SCI. Through literature review, analysis, and a modified Delphi procedure, recommendations were formulated for outcome measures that are highly recommended for use in individuals with acute SCI. Additional measures are recommended, but not as strongly. Other measures may be reasonable to use but have less psychometric data in the SCI population. You can view the complete list of measures reviewed and supporting material at https://www.neuropt.org/practice-resources/neurology-section-outcome-measures-recommendations/spinal-cord-injury:

Recommendations for patients with spinal cord injury:

Highly recommended measures:

- 6 minute walk
- 10 meter walk
- ASIA Impairment Scale
- Hand Held Myometry
- Timed Up and Go
- Walking Index for Spinal Cord Injury II
- Berg Balance Scale
- Functional Independence Measure
- Manual Muscle Test
- Needs Assessment Checklist

Recommended measures:

- Numeric Pain Rating Scale
- Spinal Cord Independence Measure III
- Spinal Cord Injury Functional Ambulation Inventory

Task force members: Jennifer Kahn, PT, DPT, NCS (Chair), Christopher Newman, PT, MPT, NCS, Phyllis Palma, PT, DPT, Wendy Romney, PT, DPT, NCS, Rachel Tappan, PT, NCS, Candy Tefertiller, PT, DPT, ATP, NCS, Eileen Tseng, PT, DPT, NCS, Cara Weisbach, PT, DPT
